

Google Expands AI Mode to Five New Languages
Google's AI Mode now supports Hindi, Japanese, Korean, Indonesian, and Brazilian Portuguese via Gemini

Blockchain Security in 2025
Blockchain faces threats like key thefts and 51% attacks but boosts security with tamper-proof logs and decentralized IDs.

AI in Cybersecurity: Dual Impact
AI is transforming cybersecurity by strengthening defenses but also enabling smarter attacks like autonomous malware and deepfakes.

Bengaluru CEO Earns Praise for Supporting Laid-Off Employee

The Bengaluru-based fintech company OkCredit recently laid off 70 employees due to financial difficulties.

However, instead of issuing abrupt termination notices, CEO Harsh Pokharna personally spoke with each affected employee. He took the time to explain the reasons behind the difficult decision and accepted responsibility for it. To assist the laid-off employees, the company provided a three-month notice period, offered referrals and job leads, and maintained involvement until nearly everyone secured new positions. As a result, 67 employees found new jobs before the notice period expired, while the remaining three received additional financial support.

Pokharna's approach has been recognised as a commendable example of compassionate leadership in an industry where layoffs are often conducted without empathy.

U.S. Senator Urges FTC Probe into Microsoft

U.S. Senator Ron Wyden has formally urged the Federal Trade Commission (FTC) to initiate an investigation into Microsoft, citing concerns of

cybersecurity negligence by the tech giant. Senator Wyden's request highlights Microsoft's continued reliance on the outdated RC4 encryption algorithm, which critics argue is vulnerable to exploitation and no longer meets current security standards. This issue gained prominence following a major ransomware attack in May 2024 that targeted the Ascension hospital chain, compromising sensitive data and affecting millions of patients and staff. The attack exploited weaknesses linked to this legacy encryption method, underscoring the urgent need for stronger cybersecurity measures.

Fun Game Corner: Challenge Your Team!

Find the brilliant move to Solve the puzzle

White to Move

- d8-Q - White pawn promotes to Queen.
- c2 - Black pawn advances (c3 → c2).
- Qd3+ - White Queen moves to d3, check.
- Kg7 - Black King moves from h7 → g7.
- Bxc2 - White Bishop captures pawn on c2.

Answer

Campus News
